

Datasheet: LFM NetView Hosting Service

EPC's, Service Providers and Owner Operators are increasingly taking advantage of additional benefits that can be achieved with 3D laser scan data outside of retrofit projects. The advantages this data provides to Owner/Operators for downstream work processes adds to the value proposition of 3D laser scan data.

Firstly, the 3D Laser scan data can be edited so that it is in-keeping with the new as-built site. This up-to-date accurate as-built information forms an integral part of an Owner/Operators asset management strategy.

Secondly, an LFM Server hosting service provides a secure ultra-high performance facility where EPC'S, Service providers or Owner / Operators can host a wealth of 3D laser scan data relating to an asset. Access can be granted to this invaluable data via LFM NetView.

EPC'S, Service providers and Owner / Operators can host a wealth of 3D laser scan data relating to an asset.

Great care has been taken to choose the optimum technology to host the data as it is not uncommon for an LFM Server database to contain more than 2000 high resolution scans, representing over 100 billion points. The hosting service is particularly appealing to Owner/Operators since for an initial set up cost and a low quarterly fee, they will receive an unlimited number of free LFM NetView software seats.

With LFM NetView remote access does not compromise what can be achieved with 3D laser scan data. It provides more functionality than simple web-enabled viewing packages, for example live project reviews can be conducted via a Master-Slave mode. An extensive range of measurements and annotations are also possible.

LFM NetView always connects back to the master LFM Server data set. The LFM NetView approach ensures that the original data set is protected. It also ensures that resolution is maintained. Alternative Internet based products involve the transfer of heavy laser data, inevitably necessitating a loss of resolution. Security and data integrity are also maintained, communications are digitally signed, password protected and data encrypted.

Owner / Operators can access over 2000 high resolution scans, representing over 100 billion points remotely and securely via LFM NetView for an initial set-up cost and a low quarterly fee.

A comprehensive range of pricing options are available. Please contact us with your requirements.
