GYRO X II

GYRO1X II / GYRO3X II Automated Gyro Stations

Determine Azimuth Anywhere, Anytime.

Backsight, traverse, and solar observation are no longer required for seeking true north when Gyro X II is at your job site. It operates anywhere, any time, even where other technologies do not work or even when no known station is available.

■ Acquire true north anytime and anywhere

GYRO X II uses a suspended gyromotor that oscillates around the earth's meridian (true north) due to the principle of precession caused by the rotation of the earth. This principle realizes faster and more precise measurement than other solutions.

Comparison with Other Solutions

	Restriction by Location	Restriction by Weather	Restriction by Time	Accuracy	Speed
GYRO STATION	None	None	None	High	Fast
RTK-GPS/GNSS	Yes	None	None	High	Fast
GPS/GNSS Static	Yes	None	None	High	Slow
Total Station	Yes	Yes	Yes	High	Slow
Astronomical	Yes	Yes	Yes	High	Slow
Magnetic Compass	None	None	None	Low	Fast

■ Only 19 minutes* for measurement

While the conventional type of instruments requires more than 40 minutes for measurement, GYRO X II requires only 19 minutes for a measurement, effectively doubling your work efficiency,* and decreasing operators' stress anytime and anywhere, on every job.

*Combination of preliminary measurement and regular measurement. In the regular measurement, users have a choice of follow-up or time measurement. When measured at 35° latitude area. Measurement time differs by the latitude due to the nature of gyro motor.

■ 15" Azimuth Accuracy

The combination of special application software and advanced motor drive system allows the true north direction to be automatically calculated in accuracy of ±15" (5mgon/0.074 mil). GYRO X II increased accuracy by 25 percent compared to the conventional manual type.

■ Eliminates the chance of human error

Freedom from human error is another advantage of GYRO X II. It eliminates floating index reading error and timing measurement error. With GYRO X II, even unpracticed operators can produce consistent and accurate results.

■ Easy operation even for unskilled operators

Only three steps are required for the measurement.

1. Point the Gyro Station roughly to the direction of true north.
2. Release the clamp
3. Push measurement button

■ Auto-pointing total stations

Gyro X II incorporates a gyroscope unit on auto-pointing total stations. These total stations are equipped with the gyro calculation programs as well as functions for ordinary surveying works to enhance efficiency and productivity on all survey projects after the measurement of true north.
